Class 390 Sound Pack

AP

Contents

How to install

1) Locate where you have downloaded this pack and unzip it. Information on how to do this can be found *here*.
2) Go to the location where you have extracted the files from the .zip file.
3) Now find the .exe file called 'Class 390 Sound Pack'. Double-click this file.
4) Follow the steps and by the end of the process, the main part of this pack will have installed.
5) If you intend to use the included scenario, make sure you have all of the requirements as listed on the product page.
6) To ensure the cab environment sounds as intended in this pack, please make sure that 'EFX' is ticked within your in-game Audio settings.

AP

Bits and Bobs

As well as sounds, some tweaks have been made which are listed below:

- FPS improved by disabling scripting on AI services that are over 2.5 miles away.

- More advanced cab setup which requires you to turn on the master key (Shift+W) and pull out the Driver Reminder Appliance (DRA).

- 1 second delay between train passing over AWS magnet and AWS warning sound occurring. The F3/F4 HUD will show the warning immediately so you must wait 1 second before trying to cancel it.

- Separate key (E) for the foot pedal to reset the Driver Vigilance Device (DVD). Foot pedal no longer linked to the Q key.

- Driver Vigilance Device (DVD) off by default.

- Driver Vigilance Device (DVD) now sounds when the pedal is lifted and the reverser is in forward or reverse.

- Pan Down & Pan Up buttons no longer need to be dragged to be pressed.

- External alarms disabled by default.

- Interior now partially visible from the outside.

Scenario

APC390SP: 9S60 10:43 London Euston - Edinburgh
Route = WCML Over Shap
Track covered = Preston - Carlisle
Traction = 390128
Year = 2018
